

## BlueStamp Engineering - Internship Position

### Summary:

BlueStamp, LLC ([www.BlueStampEngineering.com](http://www.BlueStampEngineering.com)) is an engineering education company in the midst of intense growth for the fourth year in a row. BlueStamp Engineering (BSE) is a 6 week summer program where high school students build their own engineering projects and hear from professional engineers and entrepreneurs. We are looking for a motivated and self-guided intern to help explore technical projects and drive the company's growth.

### Position:

This internship is for a candidate interested in gaining experience in a growing startup. We are looking for a person based in Denver, CO or San Francisco, CA who wants to explore both technical and entrepreneurial work. The tasks assigned to the successful candidate will be diverse, interesting, and challenging. Areas needing immediate attention by the interns include:

- Develop new ways to reach potential students beyond our current website and in-person outreach presentations.
- Identify more projects similar in scope to those completed by BSE students in the past.
- Support fundraising efforts for low income, minority, and female applicants.
- Get involved with the company's growth in any way the intern can best contribute.

### Job Perks:

- Contribute to the growth of a start-up, having an immense impact on young aspiring engineers.
- Flexible working schedule.
- Mentorship from the two company founders with lots of opportunities to ask questions and benefit from their experience and network.
- Opportunity for a project to be tailored to the intern and his or her interests.
- Referrals and recommendations from the company founders / employees to future job openings that may interest the candidate.
- Possible travel to BSE Locations in New York City, Houston, and San Francisco.
- Financial honorarium offered.

### Candidate Requirements:

- Eager to take on entire tasks and get them done.
- Fun, energetic, honest, and straightforward personality.
- Experience in education, engineering, and/or entrepreneurial work a plus

**Interested applicants** should complete a lead instructor application and submit it with a resume to [dave@BlueStampEngineering.com](mailto:dave@BlueStampEngineering.com) and [robin@BlueStampEngineering.com](mailto:robin@BlueStampEngineering.com) .

### About BlueStamp Engineering:

Started in 2010, BlueStamp began by creating an intensive 6-week enrichment program for high school students interested in engineering. The goal is to recreate an engineering environment in order to give high school students a clear understanding of the engineering profession.

Our students define their own project and build it with the guidance of an amazing staff. The daily build sessions are supplemented with brief lectures, guest speakers with engineering and entrepreneurial experience, and class discussions relating to technology. At the end of the program successful students have built their project, created professional documentation, and made a page on our Wordpress site with videos showcasing their work for future college and job applications.
